

Complete feed for fish larvae

FEATURES

Caviar is a truly unique product composed of agglomerated micro-capsules. Each capsule is filled with small peptides and low MW soluble proteins, nucleotides, EFA phospholipids and a balanced profile of chelated trace minerals. The key ingredient - frozen krill mince (*Euphausia superba*) - ensures a better palatability, increased performance and extremely low level of contaminants (metals or dioxins).

BENEFITS

- Particle more stable in water and with an easy digestion.
- Ensuring healthy larvae development and higher survival rates.
- Matching the different stages in the fish larvae.
- Micro-encapsulated diet.
- High quality ingredients.
- Classified in different sizes.
