

Red Pepper

Supplementary feed for live prey

FEATURES

Red Pepper is a supplementary enrichment product for rotifers and Artemia. Red Pepper is formulated with essential fatty acids and it contains well balanced important nutrients often lacking in yeast-based diets or lipid emulsions. The product easily disperses once placed in water. The nutrients are well protected, do not leach in the tank, thus reducing water pollution and excessive bacterial development.

BENEFITS

- Very important in fish nutrition.
- Essential for fish immunity and the development of collagen tissues.
- Less leaching enhancing feed efficiency and preserving water quality.
- Phospholipids containing fatty acid omega 3.
- Rich in vitamins.
- Unique technology, protecting essential fatty acids.
